

BRAYSON HOMES

BRAYSONHOMES.COM

Brayson Homes is a new residential homebuilder in the metro Atlanta area and a DynaSis client since 2002. Office Manager, Kim DeLong, is an integral part of the business, handling everything from closings and human resources, to the daily IT maintenance.

DeLong originally chose DynaSis after their needs grew too big for her to handle on her own. The company was in need of a professional network to connect employee PCs. DeLong recalls, "Before DynaSis we were very old fashioned, our employees saved everything to their machines, and we didn't even have a server." She explained DynaSis had excellent credibility and seems like the best fit for Brayson's needs.

Moving to the Cloud

After several years with DynaSis on-premise support, Brayson Homes found itself in another time of transition. The server management on-site was becoming more costly with the growing complexity of the network. They again looked to the experts at DynaSis to elevate their current IT systems to the next level. Brayson Homes transitioned to a cloud-based, on-demand solution called ITility in early 2010.

ITility offered Brayson Homes the ability to host all their applications and server room equipment at the DynaSis delivery center, while all routine maintenance is handled by expert engineers. They then accessed their files and applications via the Internet. ITility eliminated the need for hardware and software purchases, saving Brayson Homes significant future investments, and freeing DeLong's time to focus on other business operations.

"It only took a weekend to install ITility. We provided DynaSis with the needed information, and they handled everything. We experienced hardly any downtime and it didn't impact our business practices at all."

The Install

DeLong mentions, "It only took a weekend to install ITility. We provided DynaSis with the needed information, and they handled

everything. We experienced hardly any downtime and it didn't impact our business practices at all." Brayson Home employees were then trained on the new system and how to access their data and applications. DeLong adds, "It was very simple, DynaSis showed us everything. There was not any difficulty in transitioning to ITility."

An On-Going Relationship

"ITility is very economical for us and it allows us to focus on our business. It provides a service we need without us having to be concerned about any part of the process. ITility has functioned just as well, if not better than the old system," says DeLong. She also adds, "The DynaSis team is very courteous, and they keep us informed, even educating us on different IT topics. We would definitely recommend them to other businesses for their IT needs. They have been wonderful through the many years we have worked with them."
